Quasonix Acquires TelAntCo, Adds Antennas to Product Line

West Chester, OH – Quasonix, Inc. announced today that it has acquired 100% of the operating assets of the Telemetry Antenna Company (TelAntCo), based in Moorpark, CA.

Under Quasonix ownership, the TelAntCo engineering, manufacturing, customer support, and management team is being preserved intact, and operations are continuing without interruption in TelAntCo's existing Moorpark facility. Going forward, existing TelAntCo products will be re-branded and marketed under the familiar blue and red Quasonix logo. Systems already delivered by TelAntCo will continue to be serviced and fully warranted by Quasonix, utilizing the same personnel who built the system.

By applying the engineering and marketing resources of Quasonix, the existing TelAntCo product line will be expanded to include a number of innovative new features. Capitalizing on tighter integration between antennas and receivers, these new products will provide substantial gains in ground station performance and reliability, while simplifying operation and lowering system cost.

Terry Hill, president of Quasonix, stated that, "Quasonix has become the leading provider of telemetry transmitters and receivers, and joining forces with TelAntCo creates an even more integrated product line. Combining the personnel and products of Quasonix and TelAntCo will yield even higher levels of performance and greater value for our customers."

Paul Radcliffe, president of TelAntCo echoed this sentiment: "The synergy between TelAntCo and Quasonix is just so strong; we couldn't pass up this opportunity to make something that's much more than the sum of the parts. Our customers are going to be very happy with the system-level solutions that our combined resources can deliver."

ABOUT QUASONIX, INC.

Quasonix designs, develops, and manufactures high performance aeronautical telemetry systems and is a recognized industry leader for advanced modulations such as SOQPSK and Multi-h CPM. Quasonix' advanced product line extends from the air to the ground and includes transmitters, tracking antennas, receivers, demodulators.

Quasonix is...Reinventing Telemetry™.
