1 HyperTrack Firmware Update

1. Make sure your Antenna system is powered up and ready for operation.
2. Start the HyperTrack Client software by double clicking the icon.

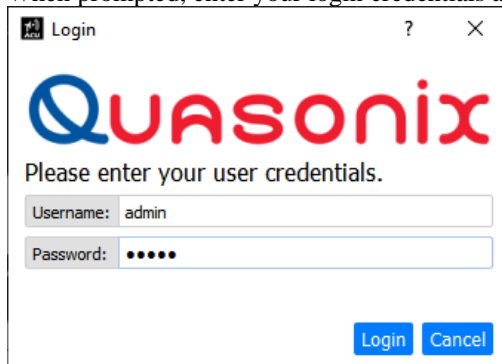

3. From the Server Selection dialog, select the system to update and click the “Connect” button.

The "Server Selection" dialog box contains the following elements:

- + Add** button
- Saved Controllers:**
 - Name:** Ohio IRAD PD450
 - URI:** 192.168.102.212:50051
 - Connect** button
 - [-] button
- Detected Controllers:**
 - Name:** Dev HTAC
 - Hardware ID:** 40020000-01166787-0C718145
 - URI:** 192.168.3.15:50051
- Exit** button

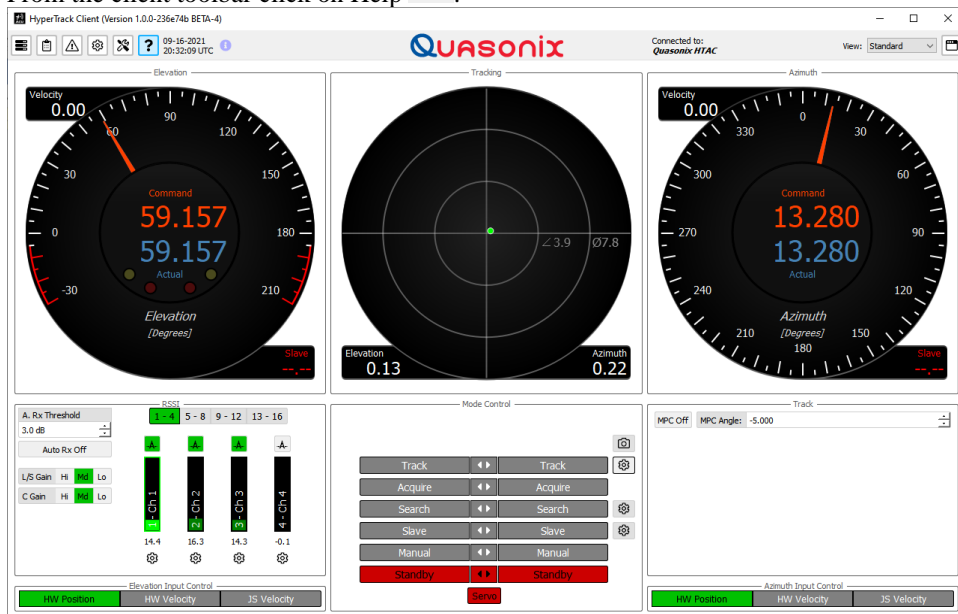

4. When prompted, enter your login credentials and click “Login”.

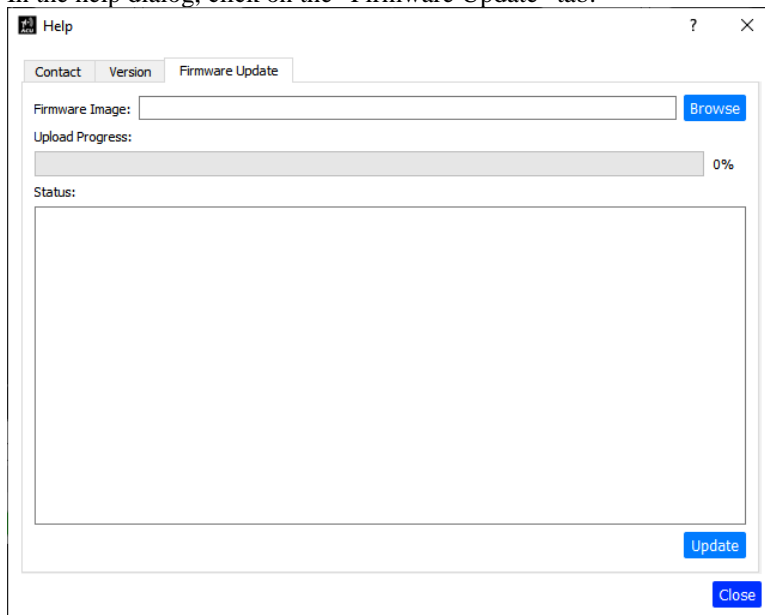

The "Login" dialog box contains the following elements:

- QUASONIX** logo
- Please enter your user credentials.
- Username:** admin
- Password:** [masked with dots]
- Login** button
- Cancel** button

5. From the client toolbar click on Help .

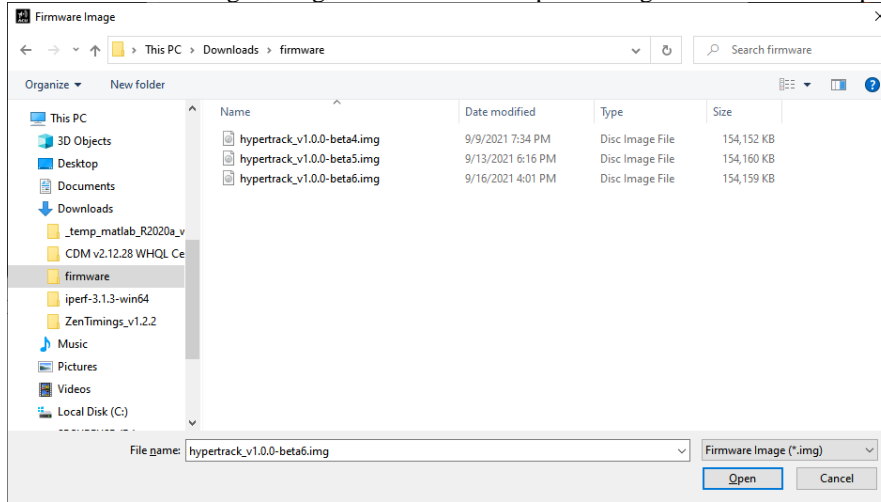

6. In the help dialog, click on the “Firmware Update” tab.

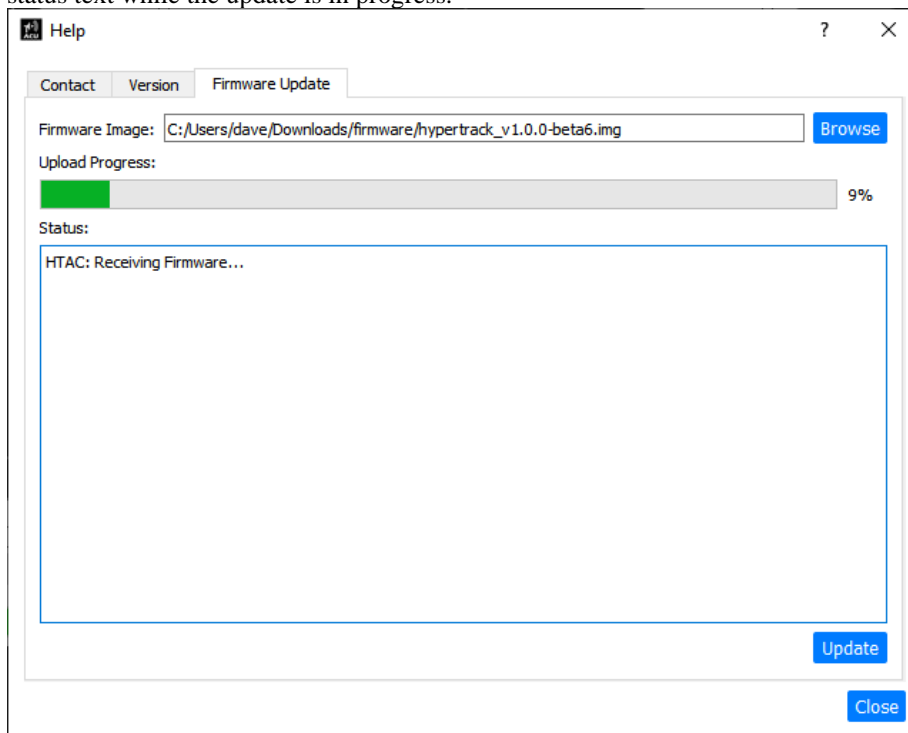

7. On the Firmware Update tab, click the “Browse” button to select the firmware update image.

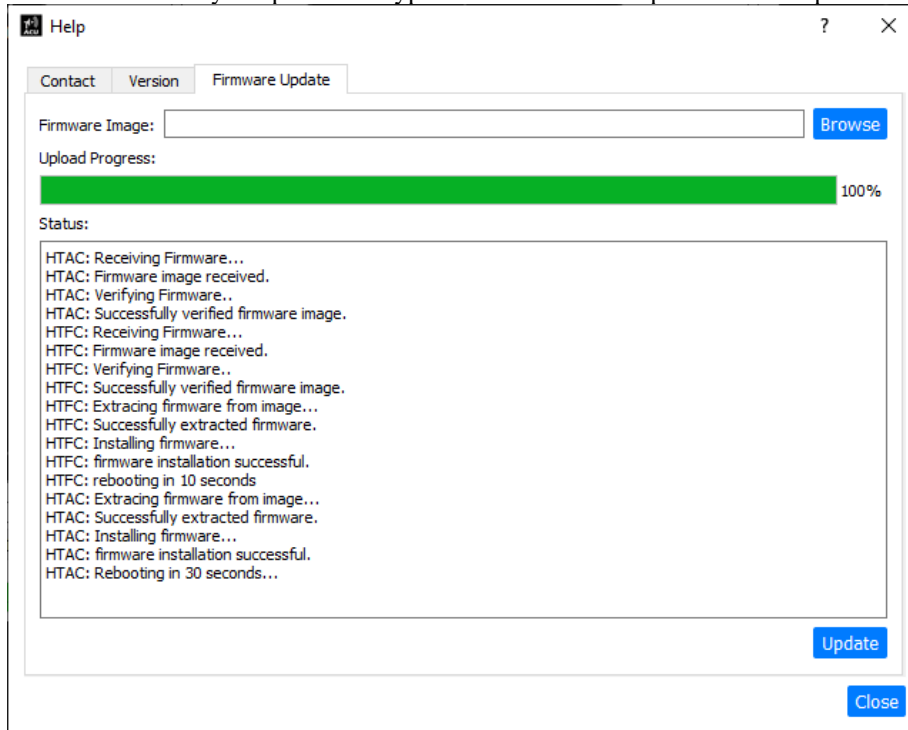

8. In the Firmware Image dialog select the desired update image and click then “Open” button.

9. On the Firmware Update tab, click the “Update” button to start the update. The status area will display status text while the update is in progress.

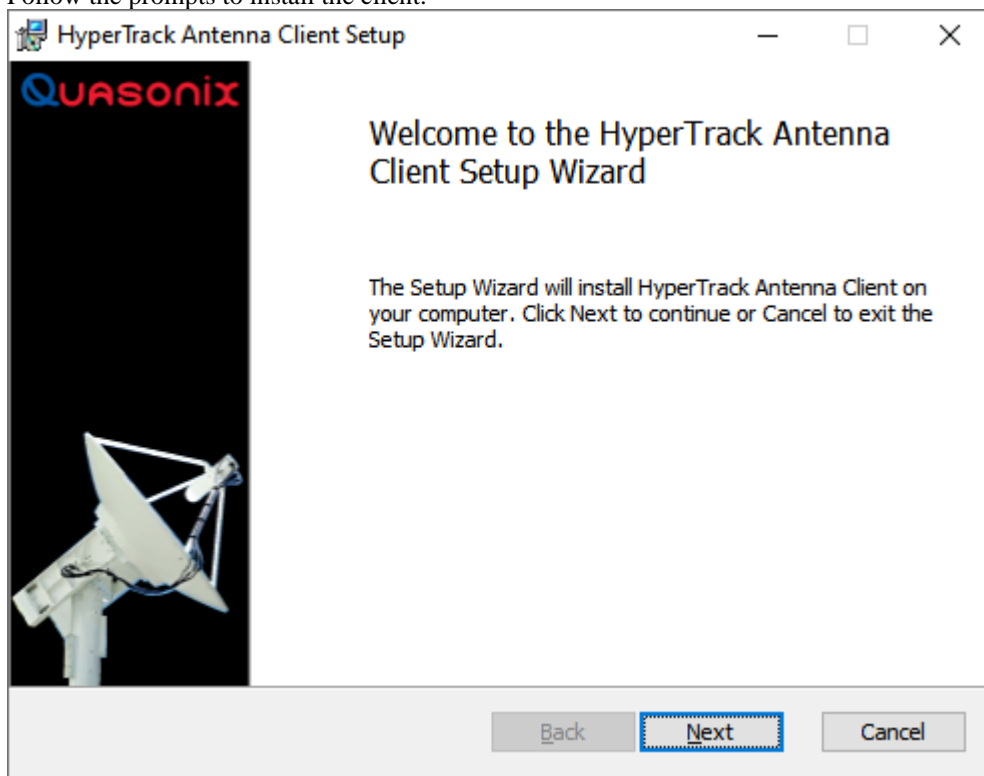

10. Once the firmware has completed updating the HTAC will be rebooted automatically. During this time it is recommended that you update the HyperTrack Client if an update has been provided.

2 HyperTrack Client Update

1. Exit the HyperTrack Client if it is currently running.
2. Double click on the client installer to begin installation.
3. Follow the prompts to install the client.

4. After the client has successfully installed, double click the application icon to start the client.
