Complete Telemetry System using a Quasonix Space Time Coded Transmitter and Receiver
With only 4% bandwidth expansion!
Advantages of the Quasonix Space Time Coding Solution:

- Eliminates link outages caused by the “two-antenna problem”
  - Improves behavior of received signal power
  - Improves overall link availability

- Two transmit/One receive configuration
  - Compatible with standard telemetry applications and installations

- STC signal spectrum is the same as SOQPSK, with minimal bandwidth expansion (4%)

- Available as a software upgrade to Quasonix RDMS™ Telemetry Receivers.
  Not: Quasonix Dual Transmitter required.
